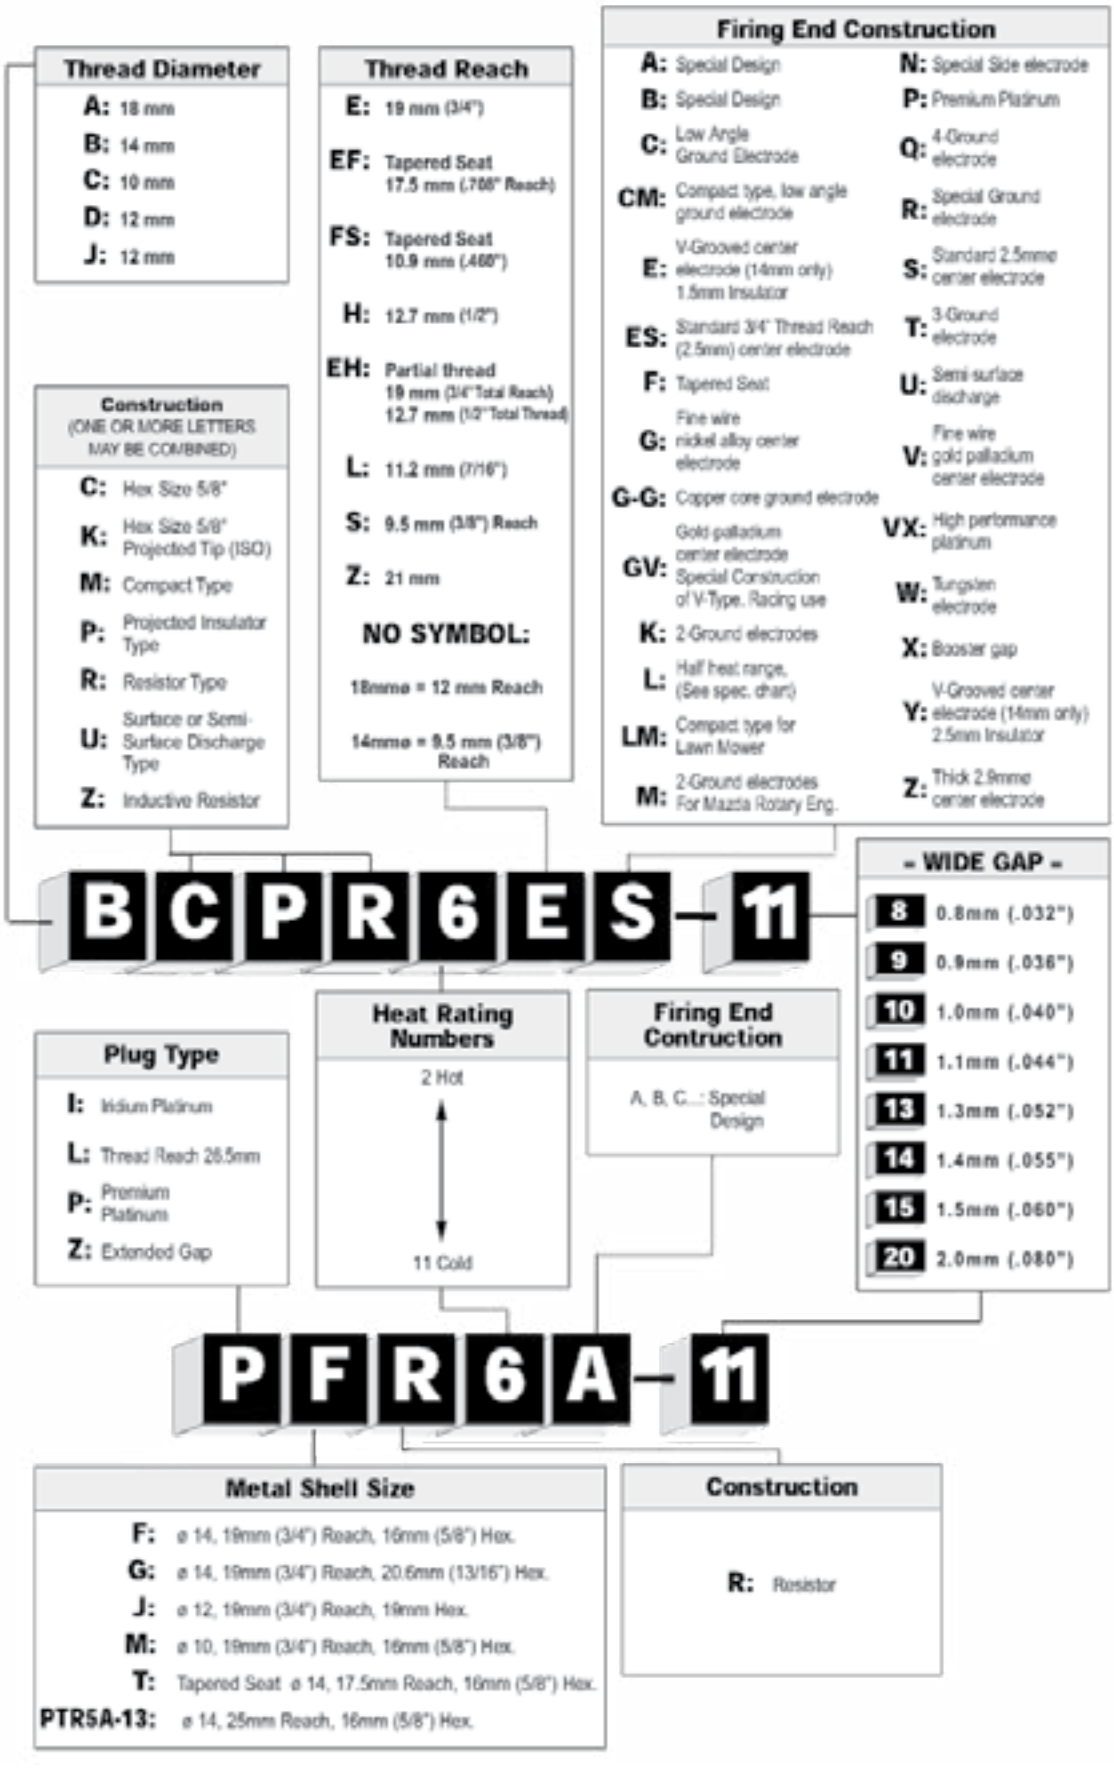
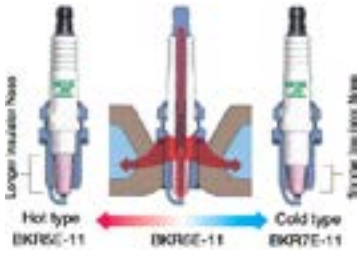
HIGH PERFORMANCE SPARK PLUGS

NGK is the largest OEM supplier and manufacture of spark plugs. A trusted brand known for their forefront of durability and performance. Extensive testing beyond the industry standard to ensure fit and performance in all applications.

- *High Grade Alumina Silicate Ceramic - Creates a stronger insulator*
- *Cold-Rolled Threads - prevents cross threading*
- *98% pure copper core - increased heat dissipation for reliable starts*
- *Trivalent Plating - no anti-seize required*





NGK HIGH PERFORMANCE SPARK PLUGS

Note: The higher the plug number, the colder the plug will be. Alternatively, the lower the plug number, the hotter it will be.

V-POWER®

V-Power spark plugs are named for their specially designed v-groove center electrode. The 90 Degree V-Groove Center Electrode allows the spark to occur closer to the outside of both the center and ground electrodes for better flame expansion For better starting, cleaner running, and better fuel economy. (BR9EYA and BR10EYA are the foul resistant replacements for BR9ES and BR10ES, and are being used as original equipment on some Snow applications)

V-Power Spark Plug	Replaces:
BR8EYA	BR8ES
BR9EYA	BR9ES
BR10EYA	BR10ES

IRIDIUM IX®

Iridium is a used at the tip of the center electrode of the plug. Iridium is a denser metal alloy, 6x that of platinum, providing an increased service life, improved ignitability and throttle response. A perfect choice for modified or high performance engines.

SPARK PLUG MAINTENANCE

Changing spark plugs regularly helps to ensure more ride time and less repair time.
Regular plug replacement prevents fouling and provides the optimal engine performance.

Temperature Sensor Relocation Kit

Retain full horsepower as your engine temperature rises! This kit makes your sled's ECM think the sled is running cooler, stopping your ECM from prematurely adjusting timing which lowers your sled's output, but will do so at a point far from causing any damage. Includes everything needed to install; T coupler, shrink tubing, wire to extend sensor and a plug for your previous sensor location.
Fits all E-tec models 600/800/850 from 2009-2018

Part No. **01-188-10**

Temperature Sensor Repair Kit

Repair your damaged connector without replacing the entire harness, simply cut off your old connector and splice this one in place. Fits models with 0808-196 or 0824-051 Coolant Temp Sensor.

Power Disconnect Switches

Easily disconnect the battery from the electrical system with the turn of a key! Key is removable and can also be used as a security device. Disconnecting the battery from the electrical system helps maintain battery level as some power sport vehicles drain battery current while in storage.

Part No. 111941

Compact key style, w/red LED. Removable key, and waterproof. This battery switch eliminates drainage of stored power. The LED wil light-up continuously at all postions when the power inputted from terminal 1 and light-up only at "on" position when the power is inputted from terminal 2.

Part No. 111942

Ski-doo Primary Rollers *Improved shifting and overall clutch action*
Stock replacement roller for all Ski-doo TRA2 or TRA3/5/7 clutches.
Ski-doo Primary Oversize Rollers *Better leverage gives harder acceleration*
Two sizes offer a wider clutch tuning range - increased weight allows more pin weight tuning options. Larger diameter decreases force of cam arms and increases shift RPM slightly

Magnum Force - Adjustable Weights for Polaris

The Magnum Force™ weight is the latest clutching technology. It improves clamping efficiency of the weight, especially at low to mid speed. It utilizes external adjustability with a gun drilled & threaded centre core where mass can be added or removed without removing the weight from the clutch. Its range of adjustment is from 60.7 to 68.4 grams, allowing its use on most naturally aspirated 600 & 800cc 2-stroke Polaris engines from elevations of sea level to over 12,000 feet. Maximum shift force on the low end with excellent top end performance. Its striking profile utilizes our most efficient heavy heel design yet, with instant response & increased acceleration. Aggressive shift profile with ease of tuning.

Part No.	Description
40-150	**60.7g to 68.4g**
40-151	**65g to 72.8g**

MTX Adjustable Weights

These are designed to harness the horsepower of high torque engines. Their unique heavy heel design & special weight profile provides substantially greater shift force, delivering much improved acceleration & top end speed. This unique design allows the clutch to backshift very responsively. Adjustable by adding weight via rivets (up to 6 grams per weight), this offers precise tuning ability for your specific combination. To order, add 4 grams to the amount of weight that you are currently using to choose the correct SLP MTX™ weight (ie: If you are currently using 64 gram Arctic Cat Weight, you should use a 68 gram MTX™ Weight). Weights sold per set of three including 6 - 1 gram. 6 - 2 gram, and 6 - 3 gram rivets.

Actual Tensions of springs vary from poundages and rates listed herein which are only COMET spring tension objectives. Certified spring tensions would cause springs to be significantly more expensive. Industry standards for springs permit an initial variance of ±10%.
To "pre-load" these springs for greater initial tension, up to 3 spring shims (Part No. 03-203849) may be used with most of them. "Bottoming out" of a spring coil upon coil even once will hasten its deterioration. Avoid using 3 shims if the "bottoming out" condition should result.

Dayco HP recreational

Designed for low to mid range horsepower engines
Dependable, smooth performance for lower horsepower vehicles. Manufactured from specially formulated fiber reinforced polychloroprene rubber compound and aramid cords.

Dayco HPX performance

Designed for mid horsepower engine applications with minimal engine modifications
Constructed with aramid cords and a fiber-loaded rubber compound - delivers increased strength and durability required from snowmobile engines with higher power and RPM.

Dayco XTX extreme performance

Developed for higher horsepower snowmobiles up to 120HP with moderate performance upgrades
Engineered to maximize the performance of high horsepower snowmobiles. A specially formulated high temperature polymer – along with engineered reinforcement – proves to perform better in a wider range of belt operating temperatures.

Dayco RPX race performance

Crafted for racing snowmobiles used in extreme environments.
This belt features precisely pre-formed cogs that enable optimal flexibility, cooler running and extended belt life, along with high twist cords that demand intense strength under extreme tension.

TM Series Carburetors - Flat Slide

- Provides significant performance improvements over older round slide carburetors
- Air flows faster and smoother through the TM Series venturi due to the flat slide design and the jet blocks which help create a smooth bore effect
- The high velocity of the air flow means a stronger vacuum at the needle jet providing more precise metering and better throttle response

Needle Shims

Fine tune your engine with the use of needle shims. These needle shims allow you to vary your needle clip positions in partial clip increments. Especially beneficial for the serious tuner to aquire every last ounce of performance or to slightly richen up mid range mixture to compensate for the lean settings found by manufactures trying to meet emissions on carb models. Sold each.

Fuel Balls

Most fuel tanks are made out of black plastics that make it difficult to tell how much fuel is remaining in your tank. Placing these white fuel balls in your gas tank adds a contrast to the fuel level, reducing the guesswork in filling and checking your tank's fuel level on a ride. Made from nylon. Sold each.

The Cobra ProTEK ATV windshield features an edgy design to match the newer ATV styling. The addition of ribs and contours give the ProTEK windshield added strength. The ProTEK has two mounting options; standard or rapid release. You do not have to remove your Cobra ProTEK shield to trailer your ATV as long as it is facing forward. Fits over 80% of current ATV models. The ProTEK has a universal fit that comes with or without a headlight cut-out, and all wind shields are clear with black graphics. Approximate shield sizes are 20"H x 36"W.

SLP ERA 2000 Silencing Technology

This silencing technology utilizes a no-maintenance silencer design to provide the most horsepower available while keeping sound levels low.

ERA 2007 Silencing Technology

This technology further silences the exhaust system while still providing great weight savings and a rich, full sound. Models equipped with this technology will sound like a snowmobile should, but the level of sound output is lower than previously experienced with ERA 2000 products.

ERA 2014 Silencing Technology

ERA 2014 Silencing Technology utilizes SLP's latest silencing designs combined with some exotic materials and manufacturing techniques, which together offer that low sound level that is expected with an SLP exhaust at a much lighter weight.

Why choose ceramic coating?

Ceramic coating insulates the pipe body to minimize under-hood heat for maximum horsepower and running consistency. This coating also provides an attractive, protective, durable finish that requires little or no maintenance.

Power Commander V

This EFI controller is the latest technology, giving you full EFI tuning capability for your fuel injected snowmobile. It allows a fuel map to be built with input points at nine different throttle positions in 250rpm increments, providing much more adjustability than other boxes. SLP has maps for many snowmobile/pipe combinations and are working on more. SLP's fuel maps can be preprogrammed into the controller for true plug and play capability. For the experienced tuner, the controller comes with a computer link cable and software for custom mapping capabilities. No wiring modifications (OEM style connectors are supplied) and no permanent changes are made to your stock system.

Power Commander Fuel Control

The Power Commander Fuel Control (PCFC) system provides a low cost alternative to the Power Commander V (PCV). All of the same fuel maps that are available for the PCV can be used in the PCFC as well. The PCFC cannot be outfitted with optional accessories such as Autotune, Wideband 2 and the LCD display and the PCFC does not have ignition timing control capabilities like some of the PCV models. Lower cost and simplicity are benefits of the PCFC. The PCFC does have end user custom fuel mapping capabilities similar to the PCV by plugging into your laptop or PC with the included computer link cable.

AutoTune

This AutoTune module is another helpful fuel injection tuning aid. How it works is the user programs a target O2 map into the module based on throttle position and RPM. Once it is connected to a PCV with the AutoTune feature turned on, the fuelling will self adjust to achieve the target O2 numbers as you ride. The best results are achieved when running at a constant throttle position (the use of a throttle stop is beneficial to keep the throttle position constant). There are some areas where the manual tuning is still mandatory due to other systems that are in place on the factory fuel injection system. SLP has initial O2 map recommendations for you to start with.

Combustion Manager for Arctic Cat Turbo

This Combustion Management Device (CMD) from is essentially a boost pressure and fuel control module for factory turbocharged models. It plugs directly into your sled's wiring harness and intercepts the signals between various sensors and the ECU. These signals are then monitored and/or manipulated and passed on to the ECU and injectors. In this way, you can manipulate the stock turbo control system to attain more boost pressure resulting in substantial increases in performance. This CMD can also add or subtract fuel up to the limit of your injectors.

Part No.	Application
70-400	09-11 - Z1 Turbo

Wideband 2

This wideband O2 gauge is an extremely accurate and capable unit. Complete with its own LCD display, it makes precision fuel injection tuning easy. The LCD display utilizes a touch screen making setup and navigation easy. It allows the user to monitor and record O2, throttle position, RPM, and one other 0 to 5 volt analogue input such as manifold air pressure, boost pressure, etc.. It can be used as a stand alone unit or connected to a Power Commander. When connected to a Power Commander, the injector duty cycle and percent of change can also be monitored and recorded.
A 1GB SD Card (part no. 70-135) is required for storage to use the record feature (1GB is the maximum usable size). This unit is extremely beneficial for precision fuel injection tuning.

PRO-RIDE NOSE CONE BLOCK-OFF

The stock belly pan on the 11-14 Polaris Pro RMK Chassis is open to the rear side in the center. When riding in deep snow conditions (12 inches or more of loose snow), this opening allows snow to pack into the belly pan under the pipe. The pipe creates enough heat that the snow melts and refreezes into a massive chunk of ice. This kit helps eliminate this problem by blocking the snow from packing in. Kit includes a formed aluminum block off plate and hardware.

The left side vent helps to keep the clutches running cool~ which considerably reduces the chance for performance loss due to heat saturation and improves belt life. The right side helps reduce underhood heat given off by the exhaust system. Vents utilize a powder snow pre-filter that repels snow and water~ yet allows air to pass right through it.

Part# 32-606 Pair - Left and Right Side

2021-24 Mountain Max

This new vent kit provides 30% more airflow in the under-hood area of the Mountain Max models. It utilizes strategically placed vents in the shock tower (clutch side only), and the side panel rear and upper areas to promote cooler under-hood temperatures to keep your engine and clutches running at their peak potential.

V-FORCE III REEDS

V-Force 3 reed valve system features a patent pending reed tip shape that accelerates the air mixture over the reed tips for even more airflow and horsepower. Applying this technology to their already incredibly successful double V-block reed cage design which doubles the reed tip surface area allowing more airflow with less reed petal movement, the V-Force 3 increases efficiency throughout the entire powerband. This results in explosive acceleration, sharper throttle response, improved fuel economy and significant horsepower gains. *Reed valve kits include, complete cages with petals and gaskets.*

More Power: Carbon fiber reeds weigh less than fiberglass reeds, so they can respond to the engine faster. It is basic physics, lighter weight things accelerate faster than heavier things. Every time a carbon fiber reed opens it lets more air into the motor. More air = More HP!

Different Versions: For most motors there are 2 to 3 versions of our reeds. Some companies will tell you that you can have more power everywhere in the powerband. **That's not true.** You have to pick where you want more power.

No Gimmicks: We don't make 2-stage reeds or 2 Vee reed cages, promising you more air flow. They may work some of the time, but they are gimmicks! More air flow on a flow bench does not equal more horsepower. Reeds depend on air velocity and response time. All the factory teams Carbon Tech works with have tried these ideas years ago and moved on. They all use stock type reed cages with single stage reeds.

Longer Life: Made from first grade aerospace carbon fiber and cut using a secret process to leave a clean edge. Test after test has shown that Carbon Tech reeds consistently outlast stock fiberglass reeds. Most aftermarket reeds of fiberglass or carbon fiber reeds don't last as long as stock reeds, let alone Carbon Tech.

Quality: Carbon Tech's customers include HRC Honda of Japan, Suzuki of Japan, TM Racing in Italy not to mention all the top race teams. They depend on consistent quality products from us. Carbon Tech routinely delivers at half the industry standard tolerances. *That's only ±0.0005"!*

Carbon Tech reeds come in different stiffness:

LT (Low Tension) - Good for bottom and midrange power - Not recommended for Polaris engines with exhaust valves.
MT (Medium Tension) - Midrange and top end power
HT (High Tension) - For high RPM power

Explanation of Style column:

AC - Original cylinder bore is alloy chrome plated, nikasil or electrofused. The cylinder must be bored to accept the new cylinder sleeve.

CI - Original barrel has a cast in iron liner in the cylinder. The cylinder must be bored to accept the new cylinder sleeve. When using a CI style sleeve, the cast in liner will *not* be completely removed. The sleeve is designed to insert into the iron lined cylinder.

CS - Original barrel has a cast-in sleeve liner in the cylinder. The cylinder must be bored out to accept the new cylinder sleeve. The cast-in liner will be bored completely out of the cylinder. Do not try to push out the cast-in liner - cylinder damage may result.

RS - Original barrel has a replacement sleeve. Heat the cylinder to remove the sleeve. Reheat the cylinder to install the new sleeve.

Explanation of Style column:

AC - Original cylinder bore is alloy chrome plated, nikasil or electrofused. The cylinder must be bored to accept the new cylinder sleeve.

CI - Original barrel has a cast in iron liner in the cylinder. The cylinder must be bored to accept the new cylinder sleeve. When using a CI style sleeve, the cast in liner will *not* be completely removed. The sleeve is designed to insert into the iron lined cylinder.

CS - Original barrel has a cast-in sleeve liner in the cylinder. The cylinder must be bored out to accept the new cylinder sleeve. The cast-in liner will be bored completely out of the cylinder. Do not try to push out the cast-in liner - cylinder damage may result.

RS - Original barrel has a replacement sleeve. Heat the cylinder to remove the sleeve. Reheat the cylinder to install the new sleeve.

Explanation of Style column:

AC - Original cylinder bore is alloy chrome plated, nikasil or electrofused. The cylinder must be bored to accept the new cylinder sleeve.

CI - Original barrel has a cast in iron liner in the cylinder. The cylinder must be bored to accept the new cylinder sleeve. When using a CI style sleeve, the cast in liner will *not* be completely removed. The sleeve is designed to insert into the iron lined cylinder.

CS - Original barrel has a cast-in sleeve liner in the cylinder. The cylinder must be bored out to accept the new cylinder sleeve. The cast-in liner will be bored completely out of the cylinder. Do not try to push out the cast-in liner - cylinder damage may result.

RS - Original barrel has a replacement sleeve. Heat the cylinder to remove the sleeve. Reheat the cylinder to install the new sleeve.

Explanation of Style column:

AC - Original cylinder bore is alloy chrome plated, nikasil or electrofused. The cylinder must be bored to accept the new cylinder sleeve.

CI - Original barrel has a cast in iron liner in the cylinder. The cylinder must be bored to accept the new cylinder sleeve. When using a CI style sleeve, the cast in liner will *not* be completely removed. The sleeve is designed to insert into the iron lined cylinder.

CS - Original barrel has a cast-in sleeve liner in the cylinder. The cylinder must be bored out to accept the new cylinder sleeve. The cast-in liner will be bored completely out of the cylinder. Do not try to push out the cast-in liner - cylinder damage may result.

RS - Original barrel has a replacement sleeve. Heat the cylinder to remove the sleeve. Reheat the cylinder to install the new sleeve.

SPI Piston & Ring Installation Guide for Snowmobile Applications

The following guide is a reference only, some models may vary (refer to the Manufactures Specifications)

Preparation

-If the old piston has failed, determine the cause and remedy the problem before replacing. Seizing on the exhaust side is caused from a lean mixture or air leak. A "four corner" style seizure is caused from insufficient warm up or clearance. A hole in the Piston is caused from detonation, a result of advanced timing or poor fuel quality. A broken piston skirt is caused from excess piston to cylinder clearance.

- To remove a piston, use a piston pin puller and heat piston if necessary (**do not hit pin with a hammer**)
- Measure the cylinder for clearances and out of roundness, service limit is .003" out of round up to 65mm / .004" out of round over 66mm larger size.
- Cast iron cylinders- finish cylinders with a 220 or 300 grit stone
- Nikasil or electrofusion cylinders - if necessary can use a 500 grit hone to clean cylinder.
- To prevent ring breakage, make sure all port edges are chamfered@ 30 deg.angles with a radius of .9 to1.4mm

TIPS

- If the cylinder is in good condition but has aluminum build up from a seizure , muriatic acid can be used to soften and clean off aluminum during cylinder preparation.

Chrome plated rings can be used in cast or nikasil or electrofusion bore but cannot be used in chrome bore. (note: Chrome was used in pre early 80's production but seldom after that)

- Always check that the ring end gap will not be in align with a port. By putting a mark on the top of the piston were the ring locating pins(s) are is a quick and easy way to check.

Installation

Check piston to cylinder clearance before assembly. Typical clearance range for snowmobiles as follows

(Always refer to manufactures specifications)

Bore size	Air cooled	Liquid Cooled
50-65mm	.003"-.004"	.004"-.005"
66-70	.0035"-.0045"	.005"-.006"
71 + up	.005" -.006"	.0055"- .0065"

- Check ring end gap, single ring piston's range from .010" to .025", two ring piston's range from .010" to .035"
- Install pistons with arrow facing exhaust or on some Polaris's the arrow will face the magneto side of engine.
- If wrist pin has a tight interference - heat the piston + oil the pin for ease of assembly.
- Put a rag under piston and carefully install circlips without bending or distorting them. Be careful they are tight in the circlip groove.
- Remove rag and make sure gasket surface's are clean, oil cylinder and install.
- Most engine builders like to position pin circlips at 12:00 o'clock or 6:00 o'clock positions

Break-In Procedure

- For the first tank of fuel on oil injected machines, use 50:1 fuel/ 2- stroke oil mixture
- On Pre-mix applications use 20:1 fuel/ 2 stroke oil mixture for first tank
- Avoid prolonged High RPM operations for the first 5 hours of use

Piston Oversize Cross-Reference

Inches	mm
.010"	.25mm
.020"	.50mm
.030"	.75mm
.040"	1.00mm
.060"	1.50mm
.080"	2.00mm

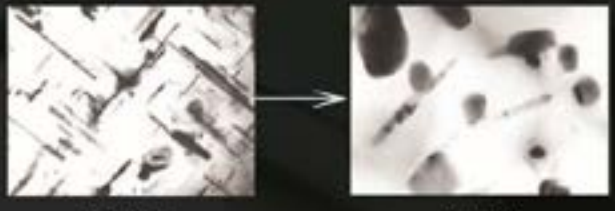
SPI SPORT PARTS INC.™

HYPERDRYVE®

PISTON KITS

WE ARE PROUD TO BRING YOU THE NEXT STEP IN THE EVOLUTION OF PERFORMANCE POWERSPORTS PISTONS. HYPERDRYVE PISTONS ARE MADE WITH A NASA DEVELOPED ALUMINUM ALLOY WHICH MAINTAINS ITS HIGH TENSILE STRENGTH UP TO 700°F (380°C). THIS IS 50% HIGHER THAN A CONVENTIONAL CAST PISTON. THIS HIGH TEMPERATURE RESISTANCE SIGNIFICANTLY IMPROVES FATIGUE STRENGTH AND IMPACT TOUGHNESS, WHICH MEANS THAT WE WILL KEEP YOU RIDING LONGER AND HARDER THAN THE COMPETITION.

CONVENTIONAL CAST PISTONS



BEFORE AFTER

HYPERDRYVE PISTON KITS

BEFORE AFTER

THE IMAGES ABOVE SHOW TWO CAST ALUMINUM PISTONS THAT HAVE BEEN MAGNIFIED TO 1,000 NANO METERS. THEY WERE BOTH SOAKED FOR 100 HOURS AT 600°F (316°C) TO SIMULATE OPERATING CONDITIONS.

IT IS EASY TO SEE THAT THE CONVENTIONAL ALUMINUM ALLOY'S PARTICLES COARSEN SIGNIFICANTLY, THIS WEAKENING OF THE MATERIAL'S BONDS WILL LEAD TO A SHARP DROP IN PISTON STRENGTH. WHILE THE PARTICLES OF OUR EXCLUSIVE ALUMINUM ALLOY HAVE ONLY COARSENED SLIGHTLY, SHOWING THAT THEY ARE STILL ABLE TO MAINTAIN A HIGHER STRENGTH FOR LONGER PERIODS.

ADDITIONAL TESTING SHOWS THAT THE BIGGEST HARDNESS DROP OCCURS AFTER 10 HOURS OF USE. OUR NEW ALUMINUM ALLOY STILL MAINTAINS TWICE THE HARDNESS OF CONVENTIONAL ALLOYS, EVEN AFTER 20 HOURS!

THIS ALUMINUM ALLOY, COMBINED WITH OUR EXISTING TECHNIQUES OF ANODIZING THE CROWNS, MACHINE SMOOTHED HEADS AND MOS2 COATED SKIRTS FOR SMOOTHER STARTUPS AND BREAK-INS, MEETS THE DEMANDS FOR TODAY'S HIGH PERFORMANCE ENGINES.

OEM STYLE PISTON KITS

Includes: 1 piston, 1 ring set. 1 wrist pin and 1 circlip set

- Engineered to provide the best possible path for combustion chamber heat transfer to the cylinder walls.
- All of our pistons, rings, pins and circlips are manufactured to OEM specifications.
- All individual components are interchangeable with original parts.
- Piston weight is comparable with original piston.

T-MOLY SERIES

*Available for some models

Includes: 1 piston. 1 ring set. 1 wrist pin and 1 circlip set

The T-MOLY series offers a number of performance benefits, please see below:

HARD ANODIZED CROWNS

Piscons that are not anodized have a hardness of HRB 60, and pistons that are anodized have a hardness of HRB 105.

This makes our pistons 75% stronger than non-anodized pistons. It also increases heat resistance, minimizes piston expansion/contraction and reduces the coefficient of friction.

MACHINED SMOOTH HEADS

A machined smooth piston crown will reflect combustion heat, while reducing carbon buildup helping to protect the top of the piston. Tests have shown that a machined smooth head can increase power and fuel economy by up to 6%.

MOS2 (TEFLON-MOLYBDENUM COATING)

MOS2 is composed of sub-micron sized particles of solid lubricant and resin blends of solvents. Our coating is rolled on, so it provides 10 times the bond strength of spray on coatings

MOS2 help draw heat through the piston walls and out the bottom which reduces heat/friction helping with break-in and preventing cold seizures.

HYPEREUTECTIC CAST

A hypereutectic cast piston has increased levels of Silicon. This not only means our pistons can be ran with tighter clearances, but will have increased hardness, higher resistance to wear, and an increased ability to withstand higher cylinder temperatures & pressure.

The SPI Fix Kits are designed to help get rid of the piston slap issue in the Polaris 800 CFI motors. The kit contains an aluminum cylinder shim allowing the use of a taller piston which significantly reduces the piston rock in the bore. Allowing a tighter piston to cylinder wall clearance, increasing the motor's durability.

TOP END AND COMPLETE GASKET SETS

SPI gaskets are manufactured to OEM spec, using the highest of quality materials and vigorously tested. The material of each component is expertly chosen for each application to withstand and provide the most resistance to the extreme conditions of high pressure and heat in your specific engine.

AF Gasket Material
Composed of NBR cellulose fiber materials; maintains tensile strength and torque retention in operating temperatures well over 300º F

Steel & Multi Layer Steel Gaskets
SPI Stainless Steel gaskets are embossed with a fluoroelastomer rubber to tightly seal the metallic mating surfaces

Seals & O-Rings
NBR, Fluoroviton, and silicone are selected for each application based upon the following characteristics: temperature resistance, abrasion resistance, chemical resistance, and their aniline point.

POLARIS DURABILITY KITS & PARTS

Durability Kits & Replacement Components | *2008-17 800 CFI & 2017-23 800 Axys*

The Wiseco Durability Kit is designed to eliminate the piston slap issue found in 2008-17 800 CFI and 2017-23 800 Axys motors. The kit contains an aluminum cylinder shim that allows you to increase the height of the piston which will considerably reduce piston rock in the bore, maintaining a tight piston-to-cylinder wall clearance. These factors increase the durability of the motor while also increasing compression; adding more power. Because of the added case volume, you will see a 2-3 HP gain!

- *Custom engineered Forged pistons are taller with a longer piston skirt*
- *Electra-Coated Rings and domes for superior strength and wear resistance and detonation protection*
- *ArmorGlide® Skirt Coating reduces noise and friction for more horsepower and provides superior strength and wear resistance*
- *Lubrication holes on the four corners for extra protection (six per side)*
- *.020" wrist pin offset helps relieve stress.*
- *Made in the USA*

Durability Kit Includes: Pistons, Rings, Wrist Pins, Circlips, .250" Aluminum Spacer Plate, Base Gasket, Top End Bearings, Longer Dowel Pins and Longer Cylinder Head Bolts
